

TASK

Description

As a user, I want to be able to search for news and preview details of any of them and support Offline caching.

It should be implemented as two screens (news list, news details). When the user selects a row it goes the next screen

News details wireframe is left for you to choose the best design for it, it should show:

- Title
- Description
- Author
- Source
- Content
- Date
- Image

API usage

You can check it out there: <https://newsapi.org/?ref=apilist.fun>

Example: http://newsapi.org/v2/everything?q=apple&from=2020-07-12&sortBy=publishedAt&apiKey=API_KEY
